

Polymarket Paper Research Dashboard - Workflow Report

Generated: 2026-05-26T10:17:40Z

Boundary: public/read-only research, paper bankroll only, no wallet, no credentials, no order execution.

Metric	Value
Candidates	300
Daily paper bets	70
Monitoring/watchlist	12
Rejected	37
Paper bankroll	100.00
Staked	100.00
Simulated ROI	-0.6%
Win/loss	28 / 42
Multi-model markets	300
Multi-model output rows	1500

Why the website looked unchanged

The prior deployment updated graph readability and mobile layout, but it did not add a dedicated Daily Bets page or downloadable model-output artifacts.

The Current Bet Book is a lifecycle ledger. It shows settled wins/losses, planning records, monitoring records, and rejected records. Daily Bets now means the current PAPER_BET shortlist for the latest research cycle.

How the system works

1. Collect public market snapshots and fixture-mode source context for the current research cycle.
2. Score each candidate through odds modeling, market/news context, and category expert agents.
3. Blend agent probabilities into a final paper forecast, expected value, confidence, risk tier, and stake size.
4. Run the intelligence layer: reliability checks, lifecycle timestamps, news monitor, correlated-odds instrument, and multi-model forecast outputs.
5. Produce a daily PAPER_BET shortlist plus monitoring and rejected records. Nothing posts orders or touches funds.
6. Persist the full model and agent output workbook for audit and review.

Model families included in the XLSX

The workbook includes odds_modeling, market_context_news, category_expert, forecast_blend, news-weighted rule, online logistic ML, OLS-style linear probability, IV-style correlated odds, deterministic tree ensemble, and final ensemble fields where available.

Each row keeps market, outcome, forecast, market price, expected value, stake, state, model probability, explanation, risk flags, news score, correlation score, and raw JSON output for auditability.

Top Daily Paper Bets

Rank	Category	Market	Forecast	Price	EV	Stake	Risk
1	macro	Will treasury yields resolve above consensus...	29.8%	25.0%	19.0%	1.50	HIGH
2	weather	Will the snowfall threshold be reached in...	37.7%	33.0%	14.1%	2.08	MEDIUM
3	weather	Will the rainfall threshold be reached in...	22.8%	20.0%	14.2%	1.07	HIGH
4	weather	Will the rainfall threshold be reached in...	24.6%	21.0%	17.3%	1.38	HIGH
5	macro	Will unemployment resolve above consensus in...	39.1%	34.0%	14.9%	1.50	HIGH
6	geopolitics	Will US election produce a verified policy...	29.8%	25.0%	19.4%	1.50	HIGH
7	macro	Will Fed decision resolve above consensus in...	21.8%	19.0%	14.7%	1.03	HIGH
8	sports	Will Boston beat Philadelphia in the MLB...	31.2%	28.0%	11.3%	1.32	HIGH
9	sports	Will Boston beat Miami in the NHL fixture #16?	53.0%	47.0%	12.9%	1.50	HIGH
10	crypto	Will Ethereum close above the stated...	24.6%	22.0%	11.9%	1.01	HIGH
11	macro	Will treasury yields resolve above consensus...	26.4%	24.0%	10.0%	0.95	HIGH
12	sports	Will Boston beat Dallas in the Champions...	42.4%	38.0%	11.5%	1.50	HIGH
13	crypto	Will ETF flows close above the stated...	61.0%	55.0%	10.9%	3.00	MEDIUM
14	macro	Will oil resolve above consensus in release...	54.7%	50.0%	9.4%	2.82	MEDIUM
15	crypto	Will stablecoin policy close above the stated...	32.1%	29.0%	10.7%	1.31	HIGH

Files produced

PDF workflow report: [web/downloads/polymarket_workflow_report.pdf](#)

Full model workbook: [web/downloads/polymarket_model_outputs.xlsx](#)

Both files are linked from the Daily Bets page on the website.

Limitations

Fixture mode is deterministic and suitable for product/reproducibility checks. It is not evidence of a live market edge.

Public API mode remains read-only. This system does not implement real-money betting, wallets, credentials, or automatic execution.

Model quality remains provisional until larger historical settlement data and out-of-sample diagnostics are validated.
